FOR IMMEDIATE RELEASE

USDA To Measure Farmers' Crop Yields

HARRISBURG, PA, July 11, 2008 - - Which survey takes only minutes to complete, yet produces some of the most valuable information farmers rely on during the crop year?

USDA's Agriculture Yield Survey is conducted in all states except Alaska and Hawaii. It is the primary tool used by USDA's National Agricultural Statistics Service (NASS) to measure crop production throughout the growing season. The survey enables NASS to track and report any changes that might occur in expected production due to weather, pests, diseases or other factors. In Pennsylvania, approximately 400 producers of hay, barley, oats, corn, sorghum, soybeans, and winter wheat are asked to assist in this important survey each month from August through November.

"Participation of Pennsylvania farmers is imperative to ensure that our production is being accurately measured," said Marc Tosiano, Director of the Pennsylvania Field Office.

Near the end of each month, selected producers will be mailed a pre-survey letter explaining the importance of the survey along with a questionnaire. Operators may return the survey through the mail, complete it through our secure website, or wait to be telephoned or personally visited by an enumerator, who will collect the necessary survey information.

Individual operation information is completely **CONFIDENTIAL** by law. "NASS safeguards the confidentiality of all survey responses and publishes only state and national level data, ensuring that no individual operation or producer can be identified," stated Marc Tosiano. Complete, accurate and timely reporting by farm operators makes the Agricultural Yield Survey an effective and timely tool for measuring the Nation's crop production.

Results from the surveys will be published in the *Crop Production* report from Washington, D.C. monthly, usually between the 9th and the 12th of the month. The results will also be available on the internet at www.nass.usda.gov. Respondents requesting results will have them mailed to them shortly after the *Crop Production* report is released.
